"One of my most productive days was throwing away 1,000 lines of code." - Ken Thompson

Vail Mountian Resorts Recruitment Team

September 17, 2026

BROOMFIELD, CO

Job Application for Marketing Technology Operations Analyst

Dear Hiring Manager,

About Me

I am a highly skilled cloud engineer and technical problem-solver with a strong background in coding, troubleshooting, and supporting cross-functional teams. My experience spans cloud engineering, full-stack development, and operational QA-focused work, with a consistent focus on building reliable systems and helping teams succeed with the tools they depend on.

Why Vail Mountian Resorts ?

I'm excited to join Vail Mountian Resorts Vail Resorts is known for creating unforgettable guest experiences on and off the mountain. As a snowboard instructor at Eldora Mountain Resort I know how to make a guest's day on the mountain as a front-of-house employee. I'm excited by the chance to support the guest experience through technology behind the scenes. The RM Tech Ops role stands out because it blends omni-channel marketing execution with hands-on technical work—improving templates, strengthening QA, and helping internal teams deliver polished, reliable messaging at scale.

Why Me?

I bring strong experience in application support and ownership, including managing complex Tier 3 and Tier 4 issues, coordinating with vendors and internal business partners, and driving incidents and enhancements through resolution. I am comfortable leading prioritization discussions, managing ticketing queues through tools such as Jira, and supporting release cycles through UAT planning, test execution, and documentation of results. Additionally, I understand the importance of operational discipline in enterprise environments, including maintaining compliance with SOX, PCI, and change management requirements. I am confident in my ability to serve as a reliable liaison between technical teams, vendors, and end users while ensuring hospitality systems remain stable, secure, and aligned with business needs.

Sincerely,

Samuel Belin
