“One of my most productive days was throwing away 1,000 lines of code.” - Ken Thompson

Summary

A Certified Solutions Architect with experience in cloud engineering, AI integration, and software development. At Tiburon cloud partners, led a GCP-to-AWS migrations using Terraform, AWS DMS, and GitHub Actions, while building scalable data pipelines with MWAA and deploying an AI orchestration platform on AWS Bedrock. My Previous roles included Full Stack Developer at the University of Denver, where I built a mental health app on GCP with Ionic, and Data Entry Specialist at Guidance Engineering, ensuring accuracy in large-scale studies, and helping set ski industry standards. As well as a long-standing Snowboard Instructor with a AASI Level 1 and Child Specialist certification with a proven ability to teach, mentor, and deliver high client satisfaction.

Work Experience

Tiburon cloud partners.

Hybrid - Remote - On site

CLOUD ENGINEER

Feb. 2024 - present

While working at Tiburon cloud partners as a Certified Solutions Architect, I partnered with several clients to modernize and optimize their cloud infrastructure. One partnership involved an AI-powered content moderation platform that needed to undergo a major migration from GCP to AWS. As part of the migration I did the following:

- Developed and maintained Infrastructure as Code (IaC) using Terraform to automate provisioning and management of AWS resources.
- Consolidated client billing and architecture by migrating data from MongoDB Atlas to AWS DocumentDB. Conducted a gap analysis, identified waves of collections to migrate in order of least to most critical, and configured AWS DMS replication instances and tasks to handle initial load and ongoing replication.
- Implemented and optimized CI/CD pipelines to deploy microservices into Kubernetes clusters, ensuring automated, reliable, and scalable delivery.
- Leveraged Google Cloud tools to execute data migration from GCP to AWS, ensuring secure, efficient, and reliable transfer of datasets.
- Integrated Snowflake with AWS Managed Apache Airflow to build and maintain automated data pipelines, improving scalability and operational efficiency.

A global shipping company needed Tiburon cloud partners services to integrate an AI into their existing platform. I designed and implemented an AI orchestration platform on AWS Bedrock for this global shipping company. The solution integrated seamlessly with the client's existing cloud infrastructure, enabling the AI to assist users with complex queries and streamline form completion. I engineered the platform to be scalable, secure, and production-ready, ensuring reliable performance while enhancing customer experience and operational efficiency:

- Designed and developed an AI orchestration platform to streamline deployment, scalability, and management of machine learning workflows.

Guidance Engineering

Seattle, Washington

DATA ENTRY SPECIALIST

Jul. 2024 - Oct. 2024

At Guidance Engineering I helped complete a decade-long study on ski resort accident rates to inform industry standards, leveraging advanced Excel functions and meticulous data verification methods to manage large, confidential datasets with accuracy, and integrity:

- Finished 10 year study on accident rates at ski resorts to help set industry standards
- Developed custom Excel VBA (Visual Basic for Applications) scripts and advanced formula functions to automate data categorization, reducing manual effort and improving accuracy.
- Maintained confidentiality and data integrity while working with sensitive information
- Conducted data verification to ensure accuracy and consistency across all records
- Optimized ingestion and management of high-volume proprietary datasets, simulating ETL (Extract, Transform, Load) workflows for accurate entry, transformation, and reporting.

University of Denver

Denver, Colorado

FULL STACK DEVELOPER

Jun. 2022 - Jun. 2023

At the University of Denver, I was chosen to lead the development of DiscoverU, a mental health support application that combined an intuitive cozy design with seamless integration of Google Cloud Platform and the Ionic Angular framework to enhance scalability and performance, while collaborating with a multidisciplinary team to drive innovation in digital mental health solutions:

- Developed a full-stack mental health support application, DiscoverU, using the Angular/Ionic and RESTful APIs, enhancing user engagement through responsive UI/UX design.
- Integrated Google Cloud Platform (GCP) services, including Firebase OAuth2.0, Firebase Buckets, Firestore, and Cloud Functions. with the Ionic framework, improving app performance, scalability, and security.
- Collaborated with a multidisciplinary team using Agile methodologies, version control (GitLab) to drive innovation in digital mental health solutions.

Certificates

2025	AWS Certified Solutions Architect , Amazon Web Services (AWS)	7bc28b4ab53143a09aa8c51a8265a669fc6439ed667e493cb6113b3c19973fdf
2025	AWS Partner AI Practitioner , Amazon Web Services (AWS)	Credential Link
2025	AWS Partner: Technical Accredited , Amazon Web Services (AWS)	Credential Link
2026	Claude with the Anthropic API , Anthropic	Credential Link
2026	Claude Code in Action , Anthropic	Credential Link
2026	Introduction to agent skills , Anthropic	Credential Link
2026	Introduction to Model Context Protocol , Anthropic	Credential Link

Education

University of Denver	<i>Denver Colorado, United States</i>
B.S. IN COMPUTER SCIENCE AND ENGINEERING	<i>Apr. 2019 - Jun. 2023</i>
• Relevant coursework: Imaging in Digital Practices, Coding in Digital Practices, Web Development Sequence
